

Sahaya Christhu Dhas

Full Stack Developer | MERN (React.js, Node.js, Express.js, MongoDB)

Chennai, India | 9025370688 | sahayadhas2811@gmail.com | [linkedin.com/in/sahayachristhudhas](https://www.linkedin.com/in/sahayachristhudhas) | github.com/Sahayadhas2811

PROFESSIONAL SUMMARY

Full Stack Developer with 5+ years of overall IT experience, including 4+ years developing and delivering production applications using React.js, Node.js, Express.js, and MongoDB (MERN stack). Currently at Prodapt, designing and developing Verizon's mission-critical telecom platforms — building RESTful APIs and React.js interfaces, with ongoing enhancement and maintenance to ensure platform stability and performance. Experienced across the full SDLC: authentication and authorization, reusable component architecture, microservices integration, containerized deployments, CI/CD pipelines, and cross-functional Agile collaboration. Recognized for reducing production defects and improving release quality on business-critical systems.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3; working knowledge of TypeScript

Frontend: React.js, Redux Toolkit, React Router, Material UI, Tailwind CSS

Backend: Node.js, Express.js, NestJS, REST APIs, JWT Authentication, Middleware, bcrypt

Databases: MongoDB, Mongoose (primary); working knowledge of PostgreSQL, MySQL

DevOps & Cloud: Docker, Kubernetes, Jenkins CI/CD (deployment & release support)

Tools & Platforms: Git, GitHub, Jira, Postman, VS Code, Power BI

AI Tools: GitHub Copilot, Google Gemini, ChatGPT

Concepts: Authentication & Authorization, RESTful API Design, Component-Based Architecture, Responsive Web Design, Agile Development, Application Maintenance & Enhancement, Debugging & Root Cause Analysis, Code Reviews

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Prodapt

Jan 2025 – Present

Client: Verizon

- Design and develop enterprise telecom applications using React.js, Node.js, Express.js, NestJS, and Redux Toolkit for Verizon's mission-critical IOP, ECHO, and WFM platforms.
- Build and deliver full-stack features by developing new React.js components, designing RESTful APIs, and extending existing functionalities based on evolving business requirements.
- Create reusable React components and enhance existing modules to improve code maintainability, UI consistency, and user experience across multiple applications.
- Design, develop, and enhance RESTful APIs using Node.js, Express.js, and NestJS to support core platform capabilities and new business functionalities.
- Perform ongoing maintenance and enhancement of application modules, including root cause analysis and issue resolution, to ensure long-term application stability.
- Collaborate with product owners, QA engineers, architects, and cross-functional teams across development, testing, deployment, and maintenance cycles.
- Execute application deployments through Jenkins CI/CD pipelines and participate in release validation to ensure successful production deployments.
- Contribute to code reviews and continuous improvement initiatives by following clean coding practices and enterprise development standards.

Achievements & Recognition

- Rising Rookie Award (August 2025) — recognized for exceptional ownership and analytical problem-solving on Verizon's telecom platform development.
- Certificate of Achievement (October 2025) — recognized for reducing production defects, improving release quality, and contributing to cross-functional engineering initiatives.

Client: Applied Materials

- Developed and maintained enterprise web applications for Applied Materials using React.js, Node.js, Express.js, and MongoDB within a microservices architecture.
- Built reusable React.js UI components and integrated REST APIs to deliver sprint-based feature enhancements and production bug fixes.
- Designed and enhanced backend REST APIs supporting core business workflows and application functionality.
- Implemented role-based authentication and authorization, and built responsive, maintainable user interfaces.
- Partnered with product owners, QA engineers, and cross-functional teams through Agile development, sprint planning, and production support.
- Participated in code reviews, defect resolution, and continuous improvement initiatives to raise code quality.

KEY PROJECTS

Enterprise Helpdesk & Ticket Management Platform

Client: Applied Materials | React.js, Node.js, Express.js, MongoDB, JWT, Material UI, REST APIs, Microservices

- Built an enterprise helpdesk platform enabling employees to raise, track, and resolve IT support requests.
- Developed React.js interfaces for ticket creation, categorization, status tracking, and dashboard reporting, integrated with Node.js/Express.js REST APIs.
- Implemented role-based authentication and authorization for End Users, IT Support Engineers, and Administrators.
- Delivered reusable UI components and production fixes within a microservices architecture.

Enterprise Asset Tracking System

Client: Applied Materials | React.js, Node.js, Express.js, MongoDB, JWT, Material UI, REST APIs

- Built an asset tracking application to manage registration, assignment, status tracking, and maintenance of IT hardware and software assets.
- Developed REST APIs for asset lifecycle management and role-based dashboards for administrators and support teams to monitor allocation and utilization.
- Delivered sprint-based enhancements and production support in collaboration with cross-functional teams.

Hospital Management System (Personal Project)

React.js, Node.js, Express.js, MongoDB, JWT, Material UI

- Built a full-stack MERN application to manage patients, doctors, appointments, and billing, with JWT-based role access for admins, doctors, receptionists, and patients.
- Designed RESTful APIs and responsive React.js interfaces for appointment scheduling, patient records, and medical history, following MVC architecture.

EDUCATION

Master of Computer Applications (MCA) — SASTRA University**Bachelor of Computer Applications (BCA)** — SASTRA University
